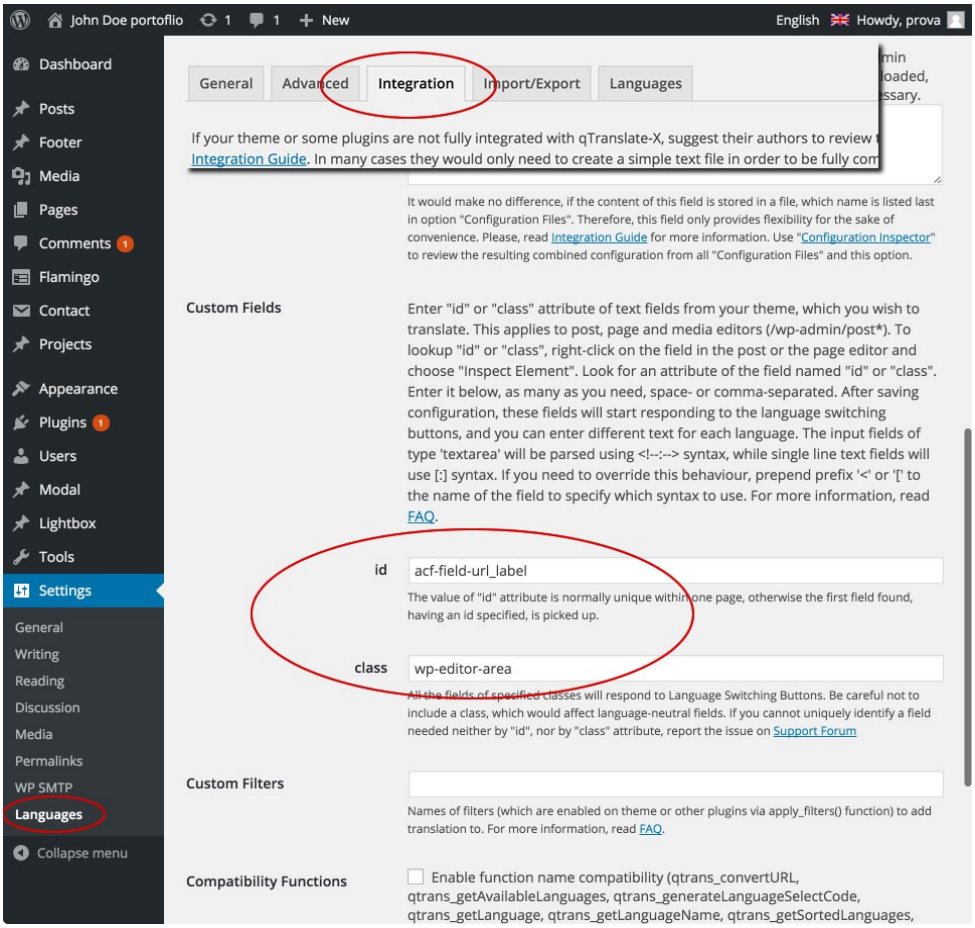
Singlepagefolio

Multi Language

Singlepagefolio is Multi-Language ready.
The script to use the recommended **qTranslate-X** plugin is already in the theme, so all you have to do is install the plugin and use it.

Follow the next 3 steps to set it up:

- Install the plugin and activate it;
- Go to Settings ☐ Languages ☐ General (tab)
  and set your languages;
- Go to Settings ☐ Languages ☐ Integration (tab)
  Custom Field ☐ Id and class
  and add this 2 codes:
  Id : acf-field-url_label
  class : wp-editor-area



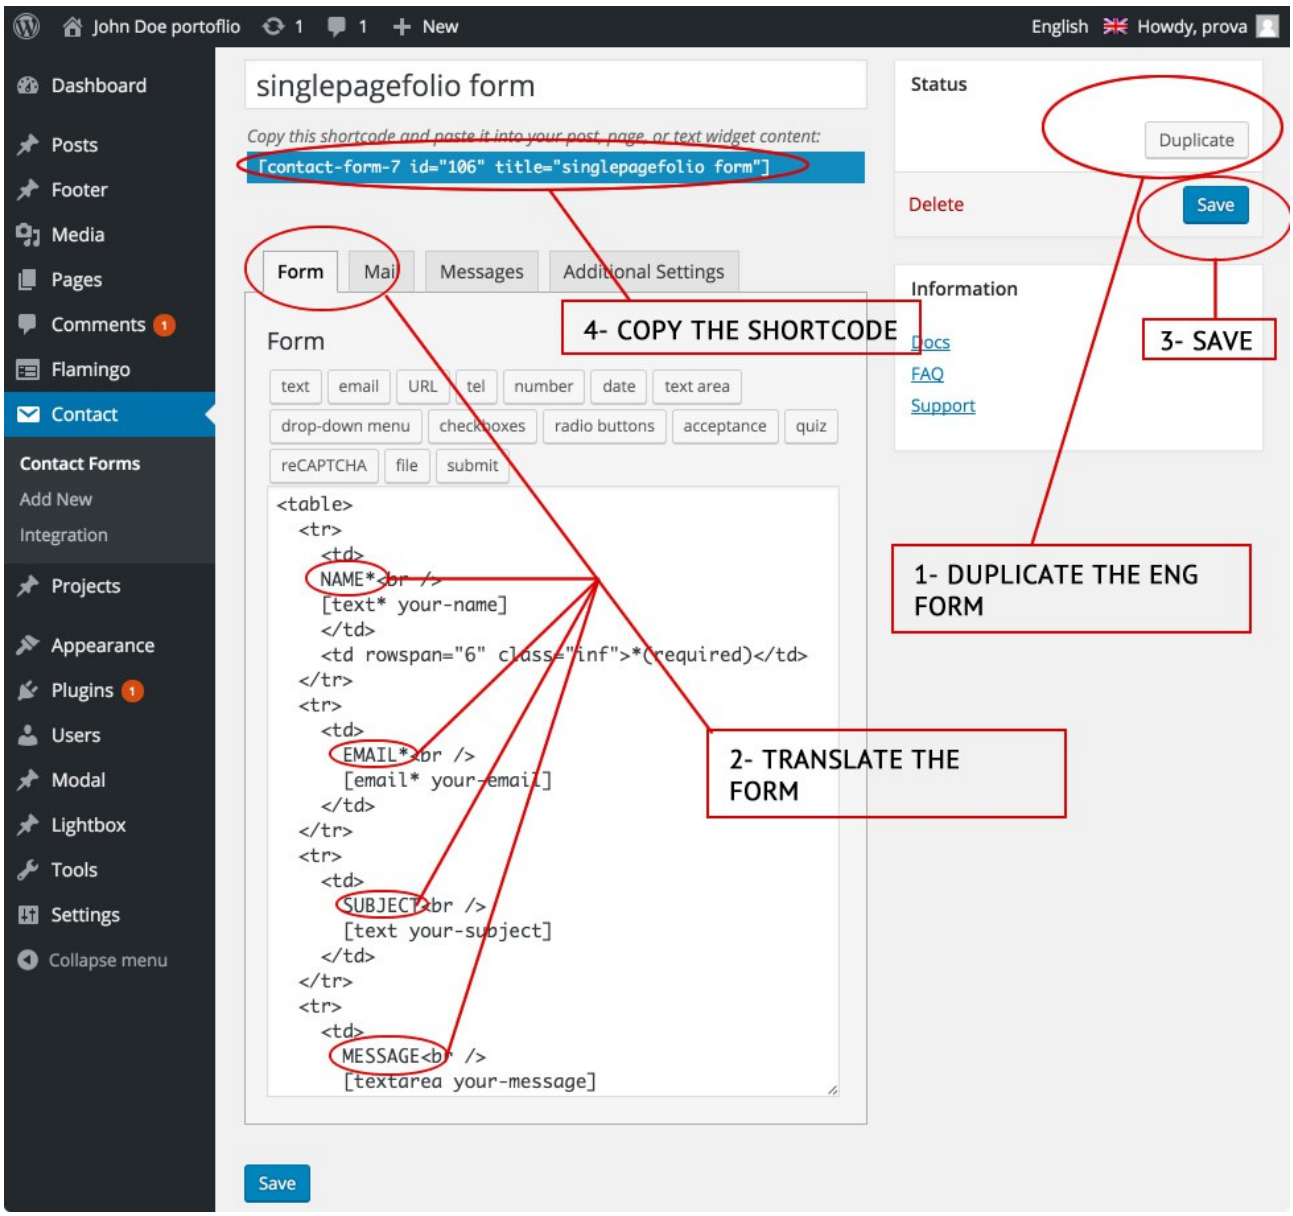
When you install the plugin some advice will pop up, read the plugin documentation and follow the advice if you want to learn more.
The plugin should also duplicate your content, so it should be easier for you to overwrite it with the new language content.

You can translate all of your content:

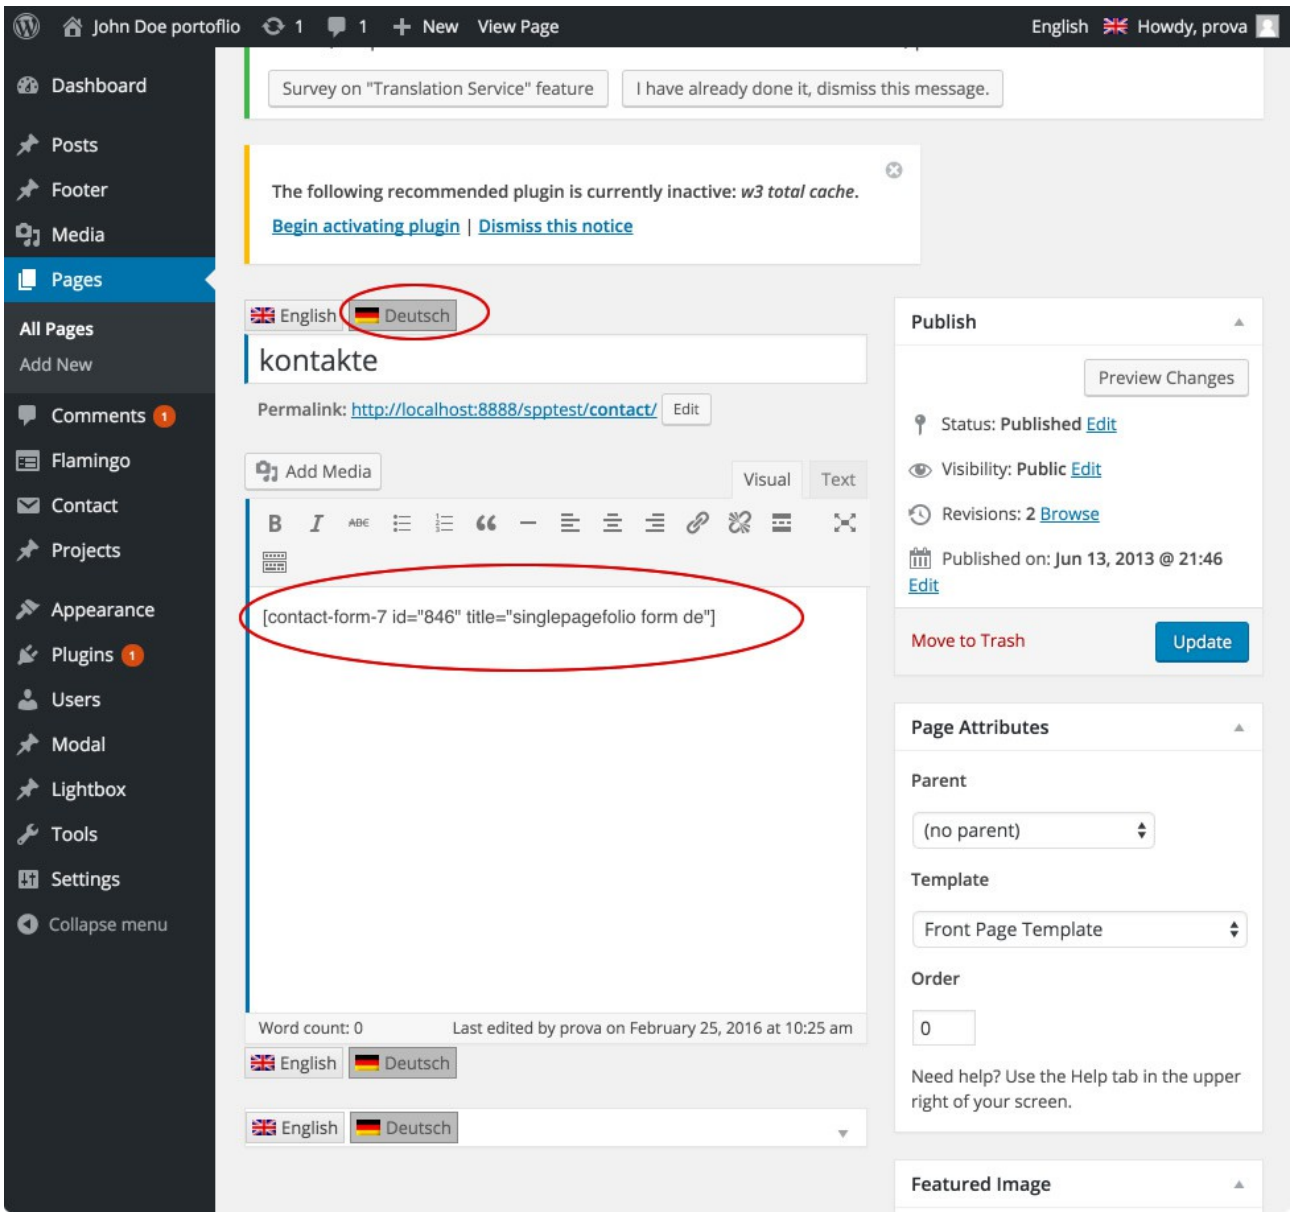
- **Posts and Tags**;
- **Footer**;
- **Pages** (see below for how to do for "Contact");
- **Projects** and **project Tags**;
- **Modals**;
- **Menu** (see below for how to do for "Menu").

Contact

- Go to Contact ☐ Languages ;
- Click on the "**singlepagefolio form**" to edit;
- Click the Duplicate button and you are directly in the new copy of the form;
- Translate the new form;



- Copy the shortcode (highlighted in blue);
- Go to Pages select "**contact**" to edit;
- Select the new language tab, so paste the new shortcode over the old one (just for the relative language);
- Click Update.



Menu

- Go to Appearance ☐ Menus ;
- Select the "**portfolio**" menu and click Select ;
- Select the language tab;
- Translate the menu labels;
- Click on Save Menu.
