

Singlepagefolio

Theme Installation

There are two ways to do it:

- via WordPress Theme :

Download the latest version of the theme from your ThemeForest account.

1. Navigate to **Appearance** ☐ **Themes** in your WordPress admin dashboard.
2. Click the **Add New** button at the top of the page and go for the **Upload Themes** option.
3. For the file upload, pick Theme Files / singlepagefolio.zip in the theme package downloaded from ThemeForest and click **Install Now**.
4. Click **Activate** once the upload has finished and you are ready for the next steps.

- via FTP:

You can manually install your theme files via FTP if you are an advanced user.

Log into your hosting space via a FTP software like [FileZilla](#).

1. Retrieve the ZIP file from your new ThemeForest download and extract the file.
2. Then simply drag and drop the new theme folder into **wp-content** ☐ **themes** location using FTP application.
3. To Activate the theme go to your site WordPress Dashboard then to **Appearance** ☐ **themes**.
4. Go to the next steps.

Note: I recommend using a child theme if you are going to customize your theme files, as this will make it easier to update your parent theme.
