

Singlepagefolio

Plugin Installation

When you install Singlepagefolio, you will get a notification message in your WordPress admin telling you of the required and recommended plugins.

Note: Please just follow the on screen prompts to install, activate or update.

Singlepagefolio includes 5 plugins that will need to be installed and activated:

- **Advanced Custom Fields** (it provides the custom fields of the theme) ;
- **Contact Form 7** (it provides the form in the "contact" section. See the related pdf to learn more) ;
- **Really Simple CAPTCHA** (it provides the CAPTCHA in the form to avoid non-human spam) ;
- **Singlepagefolio Features** (it provides the main features of the theme: custom post type, custom fields and custom taxonomy) ;
- **WordPress Importer** (so you can easily import the sample data. See the next pdf "6 Importing Demo Data.pdf" for further info).

Then there are 4 others recommended plugins, so you can decide if you need them or not:

- **Flamingo** (it manages your contact list and messages sent from the portfolio form, in your dashboard);
- **qTranslate-X** (if you need your theme to be multilingual. See the related pdf to learn more);
- **W3 Total Cache** (performance plugin that improves the speed of your site, caching it as well as minifying the source code. See the related pdf to learn more);
- **WP SMTP** (useful to send emails from the contact form just in case your hosting server doesn't do it. Settings: <https://wordpress.org/plugins/wp-smtp/screenshots/>).
