

# Singlepagefolio

## How to Use Pages

There are 3 useful pages that come with the demo data import:

- **about** (edit this one for the content of the ABOUT panel in the portfolio);
- **contact** (this one just has the shortcode that includes the form of the CONTACT panel in the portfolio. You need to edit this one only if you want to use the multilanguage option, in this case see the relative pdf in the documentation);
- **intro front page** (you can use and edit this one if you want a front page instead of the portfolio as your front page, in this case see the relative pdf in the documentation).

**NOTE: You should see a Sample Page also, it's just a sample created by wordpress, delete it if you want.**
