How to Use Lightbox

Lightbox is a useful feature, it allows you to use an image in overlay to communicate something to users (eg. Professional Christmas wishes or some promotion).

From the main dashboard menu:
Lightbox ☐
Lightbox to manage the lightboxes;
Add New to add a new lightbox.

Here's what you can set up for a lightbox:

- **Title** (the lightbox name);

- **Image desktop version** (put here the desktop image version) _note_: the notes within will help you to know the right ratio/dimension of the image;

- **Image mobile version** (put here the mobile image version)_note_: the notes within will help you to know the right ratio/dimension of the image;

- **Publish** (panel) (it is standard so it works as the post one);

- **Attributes ☐ Order** (it sets the priority of the lightbox) _note_: just one lightbox will be published, if you have more, the one with the lower number wins.

Not to be annoying, the lightbox sets a cookie that controls if the single user has already seen the message,in order to show it just once a day.

Here's the desktop version:

Here's the mobile version:
