Singlepagefolio

Custom Post Types

Singlepagefolio offers custom post types. These are content types like posts and pages. Since WordPress evolved from a simple blogging platform into a robust CMS, the term post stuck to it. However, a post type can be any kind of content. By default, WordPress comes with these post types:

- **Post**

- **Page**

- **Attachment**

- **Revision**

- **Nav Menu**

These post types can have different custom fields and even their own custom category structure.

There are 4 custom post types in Singlepagefolio Theme:

- **Projects** (the main feature of the theme, allows you to show your works, they come with project Tag as well);

- **Modal** (so you can use a banner to communicate, eg. Privacy info about cookies);

- **Lightbox** (so you have a lightbox to communicate what you want, eg. Professional Christmas wishes or some promotion);

- **Footer** (allows you to customize your footer without writing a line of code).

They are very intuitive and easy to use, but you can read the following documentation to learn more.
